

5 NEW HOOKS IN REACT 18

useTransition()

Used to mark some state updates as not urgent. While other state updates are considered urgent by default.

useDeferredValue()

Used to defer the re-rendering of a non-urgent part of the tree.

It is similar to debouncing.!

useId()

**Is a new hook for generating
Unique ID's.**

**Basically to avoiding hydration
mismatches.**

useSyncExternalStore()

Is a new hook that allows external stores to support concurrent reads by forcing updates to the store to be synchronous.

useInsertionEffect()

Is a new hook that allows CSS-in-JS libraries to address performance issue of injecting styles in render
